

Esercito Italiano at Romics: vehicles, simulators and recruitment in a 450-square-meter exhibition space

At the 37th edition, visitors met units and specialists and tried activities focused on training and technology.

Published on 05/10/2026

From **1 to 4 October**, the **Esercito Italiano** took part in the 37th edition of Romics, held at the Fiera di Roma.

In a **450-square-meter** exhibition space, visitors learned about technological developments, training and career opportunities in the military.

Vehicles and specialist systems

The area, organized by the **Comando Territoriale Nazionale dell'Esercito**, welcomed young people and adults over the weekend. Visitors tested themselves on the Alpine troops' climbing

wall.

Among the systems on display was a **robotic reconnaissance dog**, intended for use in contaminated environments for activities related to public safety and defense.

Also on display were a **VTLM “Lince”** and a Cougar, tactical vehicles used by the Esercito Italiano in operational activities.

Simulators, cartography and recruitment

With music from **Radio Esercito**, visitors tried motorcycle and helicopter flight simulators. The initiative also showcased several specialties of the Armed Forces.

These included the profession of cartographers at the **Istituto Geografico Militare**, with information on their respective activities.

At the information point, Esercito Italiano personnel described their daily commitment to serving the public. **Recruitment opportunities** were also presented to young people and families.
