

Italy Joins the European Nuclear Alliance: A Crucial Step for the Energy Transition

Published on 20/06/2025

On June 16, 2025, Italy officially joined the European Nuclear Alliance, a decision that marks a significant change in the national energy landscape and European energy cooperation. Until that moment, our country had participated in the initiative as an observer, but now, with full membership, Italy actively enters the alliance whose main purpose is to strengthen the use of nuclear energy in Europe. The news was announced by the Minister of Energy Security, Gilberto Pichetto, during a meeting of the alliance held in Luxembourg, on the sidelines of the European Union Energy Council.

This alliance, which was born in 2023 under the leadership of France, represents a platform for countries favorable to nuclear energy, aiming to promote a common energy policy among member states that share the vision of a safer and more sustainable energy future. In addition to Italy and France, the alliance includes other countries such as Belgium, Bulgaria, Croatia, the Czech Republic, Hungary, the Netherlands, Romania, Slovakia, Slovenia, and Sweden. Italy's inclusion in the alliance further strengthens this European cooperation.

Technological Neutrality and Sustainable Energy Transition

Italy's membership in the Nuclear Alliance is not only a strategic move but also marks a commitment to the principle of technological neutrality, at the heart of the European Union's energy policies. This principle ensures that decisions on which technology to adopt for the energy transition are not influenced by ideological biases but are based on the assessment of the most effective solutions to achieve climate goals. With nuclear playing an increasing role in European energy policy, Italy is embracing a pragmatic vision, recognizing the potential of nuclear as a decarbonized, safe, reliable, and programmable source.

The Italian government has repeatedly stated that the transition towards greater sustainability must be based on a diversified energy mix, in which nuclear offers a complementary resource to renewables, capable of ensuring stable energy production. With this membership, Italy aligns with European policies, contributing to the development of a regulatory framework that supports the growth of nuclear energy and allows member states to access clean, but also safe, energy resources capable of addressing the challenges of climate change.

The Future of Nuclear in Europe: An Ally in Energy Security

Italy's membership in the European Nuclear Alliance also has a geopolitical dimension. The European Union is facing an increasing dependence on external energy sources, such as gas, an aspect that becomes particularly problematic in a period of international instability. In this context, nuclear energy is proposed as a strategic solution, contributing to Europe's energy security and reducing vulnerability to external crises. Italy, with its active participation in the

Alliance, becomes a fundamental voice in defining European energy policies, sharing the responsibility of ensuring the security and sustainability of energy production.

The Nuclear Alliance is not only an opportunity for member countries to develop new technologies but also to work together in creating common infrastructure and safety standards, improving risk management and increasing the reliability of nuclear plants. Italy, in collaboration with other members, aims to define a regulatory framework that supports the entire nuclear cycle, from research to plant management, including energy production. This collaborative approach is crucial to ensure that nuclear, despite the challenges related to waste management and safety, becomes a fundamental resource in the European energy strategy.

In conclusion, Italy's entry into the Nuclear Alliance represents a fundamental step for Europe's energy future. With the aim of ensuring a sustainable, safe, and resilient energy transition, the alliance aims to strengthen the role of nuclear energy as one of the pillars of European energy production. Our country, with this move, not only enhances its energy policy but becomes a leading player in a project destined to shape the continent's energy future.
