

La Folgore flexes its muscles: the 183rd Paratroopers Regiment Nembo concludes 3 weeks of intense training at Monte Romano

Published on 18/12/2025

An intense training activity lasting about three weeks has recently concluded, featuring the **183rd Paratroopers Regiment "Nembo"** of the **Folgore Paratroopers Brigade**, engaged in the training area of **Monte Romano (VT)**. A complex and articulated training cycle aimed at maintaining high standards of **operational readiness**, cohesion, and command and control capabilities in realistic scenarios.

“Scorpione 7/25”: command, control, and operational realism

The first two weeks took place within the exercise “**Scorpione 7/25**”, conducted in coordination with the **CAT - Tactical Training Center**. In this phase, the Nembo paratroopers refined the **command and control (C2) procedures** operating in a complex environment, made particularly realistic thanks to the use of the center's simulation systems.

The training allowed the command staff to exercise decision-making processes under pressure, improving information management, unit synchronization, and the ability to adapt to the variables of the modern battlefield.

“Grizzano 25”: aerial mobility and offensive operations

The third week was dedicated to the exercise **“Grizzano 25”**, during which the regiment could rely on the support of the **1st AVES Regiment “Antares”**, employing a **CH-47 Chinook** asset. Thanks to the capabilities of the rotary wing, the Nembo paratroopers conducted **airdrops**, insertions, and **offensive operations**, enhancing aerial mobility as a multiplier of tactical effectiveness.

The training event also involved units from the **8th Engineer Sappers Regiment “Folgore”**, the **185th Artillery Paratroopers Regiment “Folgore”**, the **187th Paratroopers Regiment “Folgore”**, the **7th CBRN Defense Regiment “Cremona”**, and the **11th Transmission Regiment “Leonessa”**, in a fully **multidomain** context.

“Imperio” system and situational awareness

Patrolling activities — **on foot and motorized, day and night** — were managed through the command and control system **“Imperio”**. The use of this tool ensured a **situational awareness** constantly aligned with the reality of the terrain, allowing commanders to monitor the progress of operations in real-time, accelerate the decision-making cycle, and accurately assess the effectiveness of maneuver units.

ARF and high readiness capabilities

During the training, the procedures of the regiment's unit currently integrated into the **ARF - Allied Reaction Force**, a multinational and multidomain force with **very high operational readiness**, deployable with extremely short notice, were consolidated. In particular, the personnel carried out **infiltrations via TCL (Free Fall Technique) drop**, followed by **reconnaissance and target acquisition activities**, confirming the unit's ability to operate in depth and independently.

Training as operational assurance

The activity carried out at Monte Romano confirmed the efficiency level of the **183rd “Nembo”**, reaffirming the central role of continuous training in ensuring the operational effectiveness of the **Folgore Brigade**. Professionalism, interoperability, and realism remain the pillars on which the readiness of Italian paratroopers is based, called to operate in increasingly complex and dynamic scenarios.
