

The Paratroopers of the 183rd Regiment Nembo patrol the demarcation line between Kosovo and Serbia

Published on 07/03/2025

The Paratroopers of the [183rd Regiment Nembo](#), engaged in the [NATO operation Joint Enterprise](#), play a key role in patrolling the demarcation line (Administrative Boundary Line - ABL) that separates Kosovo from Serbia. The activity, entrusted to the 183rd Regiment as the framework unit of the Regional Command West (RC-W), involves the control of an area of about 8,000 square kilometers, characterized by rugged terrain and altitudes exceeding 1,500 meters.

Specifically, the demarcation line in the Italian area of responsibility extends for over 16 kilometers. The soldiers of the RC-W, currently led by Colonel Francesco Errico, ensure compliance with the Military Technical Agreement signed in 1999, maintaining a constant presence to safeguard security along the ABL. For these operations, the units use the Light

Multirole Tactical Vehicle (VTLM) “Lince” and the tracked vehicle BV 206S, in addition to specific equipment for foot movement in particularly rugged or snowy areas.

The patrol task entrusted to the 183rd Regiment "Nembo" is part of the operational activities of the Regional Command West of KFOR, aimed at ensuring the stability of the area and promoting cooperation with international organizations and local authorities. These initiatives are conducted in full respect of the principles of transparency and impartiality, in line with United Nations Security Council Resolution 1244 (1999). The contribution of the Italian Paratroopers once again confirms the professionalism and readiness of the Italian Armed Forces in international contexts.
